14.6 AM MESSAGE REQUESTS TO MOTOR VEHICLES DEPARTMENTS

Administrative Messages should **not** be used in lieu of the Nlets KQ transaction unless no record is found or additional information is required.

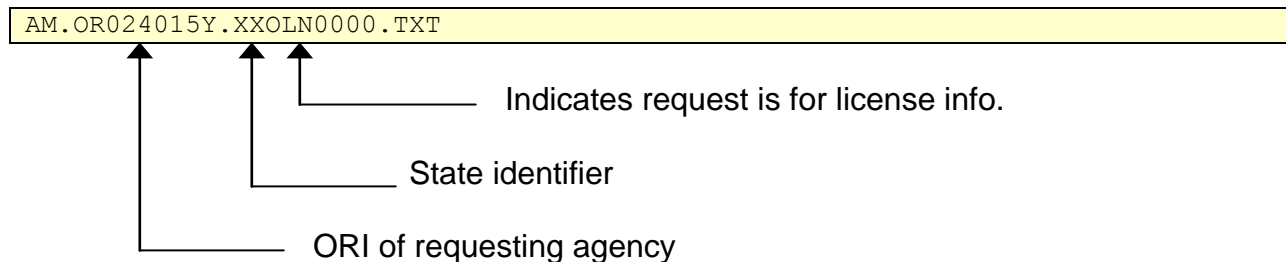

Driver History queries on name may result in multiple hits. Only close matches (i.e., exact match on the last name and DOB) should be returned. When multiple hits do occur, they should be returned to the inquirer as separate messages.

If there is additional information required that was not included in the reply, an administrative message (AM) may be sent. These administrative messages should use the standardized ORI shown in the example below.

When requesting information via administrative message, include all information available to assist the motor vehicles department to locate the information you need.

For example, when inquiring for information by name, include the complete name date of birth, city of residence, and address if available.

14.7 NLETS AUTOMATED HELP FILE

The Nlets has an automated "Help" file, where each state may enter information relating to its motor vehicle registration records, including how to interpret those records. Users also may determine who is providing automated responses to registration queries and who has a HELP file by sending an Administrative Message to "NLOLNHELP".

Use the format shown below to obtain a list of states that have entered information into the NLETS "Help" file.

14.7.2 HELP FILE INQUIRY FORMAT FOR LICENSE NUMBERS

Each message transaction is comprised of multiple data elements; this section provides the necessary information on data elements for this transaction. Each data element is identified by a specific field name. Each field name is abbreviated with a unique three-character code called a message field code (MFC). The MFC's are sorted alphabetically, then followed by a plain-word description of each. The number immediately following the description indicates the maximum number of characters allowed for that data element.
